

# Real-Time Wireless Key Management

## Enhance business with Real-Time productivity tools

Real Estate Associations and Multiple Listing Services that select Supra's key management system create a competitive edge for their members. Knowing when every showing occurs creates sales opportunities that are uniquely Real-Time.

### **Time saving convenience with true wireless performance**

Eliminate access-code lookup and tracking, docking, printing and shuffling hot sheets.

### **Fuel savings and flexibility with mobile office productivity**

No need to run by the office for keys or printouts, or backtrack for keys to accommodate a change in plans

### **Offer additional client services with Real-Time feedback**

Unparalleled home seller security is enhanced with automated showing reports. Real-Time access to showing feedback to answer questions, and responsiveness to clients even from remote locations.

### **More sales opportunities with productivity tools**

Knowing your lockboxes are smart and secure puts your clients at ease. The iBox is easily accessible to authorized agents, even in the worst weather, yet the solid construction is very resistant to attack.

“I was at lunch when a client called me about a house where a sign had just been put out. I did not have to leave my lunch and did not even have to hang up with them. I went to my hot sheet on my smart phone, found the new listing, and gave them the info they wanted. They said they wanted to see it ASAP. I then called the listing agent's office, set up the showing within the hour and with the map link that I get with Supra, I drove to the listing. I met the clients, they loved the house and we wrote the offer which was accepted that night...”

— Lucie Hunt, Indiana

## Real-Time technology secures homes

Protect home sellers, your Association, and your members with advanced security measures that are only possible with Real-Time true wireless communications. Your members tap the power of Supra's Real-Time Wireless Information Network whether they choose to use ActiveKEY devices or run eKEY applications on their smart phones. With Real-Time wireless security, an Association need never worry that an unidentified person is accessing lockboxes.

## Prevent code-sharing and unauthorized entry

Lockboxes can only be opened with an electronic key or software, and access codes are routinely updated. Codes can't be shared and boxes can't be manually opened, so unauthorized entry is prohibited. Code updates are performed automatically and wirelessly by the device without agent intervention or hassle.

## Secure, monitored access

A Real-Time audit trail is established when the lockbox is opened. The electronic key identification and the date/time of access are immediately transmitted to Supra's database through wireless communications. Whether cooperating with police to investigate a crime, or simply confirming showing activity, the access records to a home are always up to date and always available.

## Everyone wins with Real-Time wireless

Choosing the right key-management technology for your members is easy with Supra's Real-Time Wireless key management. Industry leading, true wireless performance delivers Real-Time information that is needed in today's fast-paced environment. Your Association can be confident that listed homes are secure and monitored. Agents obtain more referrals, close more business, and work more efficiently with Real-Time productivity. Real-Time helps Associations and members demonstrate the value of real estate professional services so that fewer home sellers choose to try selling their own homes.

## FREE unlimited hotline support!
